Organic Contaminants in Riverine and Groundwater Systems

Jan Schwarzbauer

Organic Contaminants in Riverine and Groundwater Systems Jan Schwarzbauer

This book summarizes a selection of organic-geochemical investigations, which deal with the characterization and environmental behaviour of organic contaminations of German river and groundwater systems. The aim is to resume and present an overview of comprehensive current research activities, which have been published diversely in specialised scientific journals and, are therefore not easily available in a concise and clearly arranged way. Important topics include comprehensive non-target screening as well as isotope analysis of contaminants in water and sediments, detailed characterisation of bound residues, recording riverine pollution histories and an extensive application of the anthropogenic marker approach.
