Shingles: New Hope for an Old Disease

Mary-Ellen Siegel, Gray Williams

Shingles: New Hope for an Old Disease Mary-Ellen Siegel, Gray Williams

At some point in their lives, up to 20 percent of the population will be affected by shingles, which is officially known as herpes zoster and is caused by the varicella-zoster virus?the same virus that causes chickenpox. It attacks adults who had chickenpox as children but whose immune system has weakened due to aging, illness, drugs, radiation therapy, or physical or emotional stress.

For many people shingles is a temporary condition, which starts at a nerve root and moves to the skin, causing a burning pain, rash, and blisters, all subsiding within a few weeks. But almost one-third of all cases are further afflicted with a painful complication called post-herpetic neuralgia, or PHN, which can continue for months or even years. Other potential complications of shingles include inflammation of the eye, which could lead to loss of vision.

This book shows the reader how early recognition of symptoms, along with the use of the newest antiviral drugs, can hasten recovery from shingles and its complications. Detailing causes, symptoms, treatments, and ways of finding the best care for shingles and PHN, *Shingles* also discusses recent developments in preventing shingles through the use of a varicella vaccine.
