MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications

A. R. Jha

MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications A. R. Jha

The integration of microelectromechanical systems (MEMS) and nanotechnology (NT) in sensors and devices significantly reduces their weight, size, power consumption, and production costs. These sensors and devices can then play greater roles in defense operations, wireless communication, the diagnosis and treatment of disease, and many more applications.

MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications presents the latest performance parameters and experimental data of state-of-the-art sensors and devices. It describes packaging details, materials and their properties, and fabrication requirements vital for design, development, and testing. Some of the cutting-edge materials covered include quantum dots, nanoparticles, photonic crystals, and carbon nanotubes (CNTs).

This comprehensive work encompasses various types of MEMS- and NT-based sensors and devices, such as micropumps, accelerometers, photonic bandgap devices, acoustic sensors, CNT-based transistors, photovoltaic cells, and smart sensors. It also discusses how these sensors and devices are used in a number of applications, including weapons' health, battlefield monitoring, cancer research, stealth technology, chemical detection, and drug delivery.

From reader reviews:

Jenny Dill:

Why don't make it to become your habit? Right now, try to prepare your time to do the important action, like looking for your favorite guide and reading a e-book. Beside you can solve your condition; you can add your knowledge by the guide entitled MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications. Try to face the book MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications as your friend. It means that it can to be your friend when you experience alone and beside associated with course make you smarter than previously. Yeah, it is very fortunated for you personally. The book makes you more confidence because you can know every thing by the book. So , we should make new experience as well as knowledge with this book.

Vera Forde:

A lot of people always spent their free time to vacation as well as go to the outside with them loved ones or their friend. Did you know? Many a lot of people spent they will free time just watching TV, as well as playing video games all day long. In order to try to find a new activity that's look different you can read a new book. It is really fun for you personally. If you enjoy the book that you read you can spent all day every day to reading a guide. The book MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications it is quite good to read. There are a lot of those who recommended this book. We were holding enjoying reading this book. In case you did not have enough space to develop this book you can buy often the e-book. You can m0ore effortlessly to read this book from your smart phone. The price is not to cover but this book possesses high quality.

James Robicheaux:

Do you have something that you enjoy such as book? The publication lovers usually prefer to select book like comic, limited story and the biggest the first is novel. Now, why not hoping MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications that give your satisfaction preference will be satisfied by simply reading this book. Reading practice all over the world can be said as the opportunity for people to know world much better then how they react toward the world. It can't be said constantly that reading behavior only for the geeky man but for all of you who wants to possibly be success person. So , for every you who want to start reading as your good habit, you could pick MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications become your starter.

Eddie Patten:

Your reading sixth sense will not betray you actually, why because this MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications book written by well-known

writer who knows well how to make book which might be understand by anyone who also read the book. Written throughout good manner for you, dripping every ideas and writing skill only for eliminate your hunger then you still skepticism MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications as good book not merely by the cover but also through the content. This is one reserve that can break don't ascertain book by its handle, so do you still needing another sixth sense to pick this kind of!? Oh come on your looking at sixth sense already said so why you have to listening to an additional sixth sense.
