This book presents the ImprovAbility model. Originally developed to measure the ability to improve an organisation, but in this book adapted to projects and including a self assessment tool. The book will also tell you about contingency and how you can decide your own Project type. This is important because you may not need to improve a specific area in the situation you are in. Thus you need the contingencies of your project to know what to improve. You will also hear about experiences using the ImprovAbility model. The model was originally developed in a Danish research project with DELTA responsible for the project, the IT University of Copenhagen responsible for the research, and four Danish companies - ATP, Danske Bank, PBS and SimCorp - responsible for ensuring relevance and testing the model. Two chapters tell in detail about the experiences using the model. Finally, there are also a few chapters that go beyond the project. One chapter discusses how you should organise improvement efforts. Another chapter discusses which change strategy to use for improving at the organisational level. And the final chapter in the book discusses roles in improvement and who should be doing what?
