Computers and Computations in the Neurosciences: Computers and Computations in the Neurosciences v. (Methods in Neurosciences)

Computers and Computations in the Neurosciences: Computers and Computations in the Neurosciences v. (Methods in Neurosciences)

Methods in Neurosciences, Volume 10: Computers and Computations in the Neurosciences discusses the use of computers in the neurosciences. The book deals with data collection, analysis, and modeling, with emphasis on the use of computers.

Section I involves data collection using a personal microcomputer system. One paper presents a tutorial on using a PC-based motor control composed of an electronic circuit to adjust the motion of a light microscope stage through a software program. Other papers discuss computer methods in nuclei cartography and a computer-assisted quantitative receptor autoradiography in studying receptor density distribution. Section II deals with data analysis and some computer programs for kinetic modeling of gene expression in neurons. The book also discusses a computerized analysis of opioid receptor heterogeneity by ligand binding in test animals using computerized programs instead of employing manual or graphical methods. Computerized curve-fitting allows the researcher to utilize a more precise mathematical model to describe the binding of one ligand to one class of sites. Section III evaluates data modeling and simulations and describes the practicality of using computers to design model ion channels. Another paper discusses a graphical interaction program called MEMPOT to simulate an electrophysiological investigation of the properties of the membrane potential in stimulated cells. The book also presents a quantitative data gathered from computer simulation of the factors that affect neuronal density per measured sections.

The book is suitable for microbiologists, biochemists, neuroscientists, and researchers in the field of medical research, as well as for advanced computer programmers in medical research work.

From reader reviews:

Alexander Macdougall:

This book entitled Computers and Computations in the Neurosciences: Computers and Computations in the Neurosciences v. (Methods in Neurosciences) to be one of several books in which best seller in this year, honestly, that is because when you read this book you can get a lot of benefit upon it. You will easily to buy this particular book in the book retail outlet or you can order it via online. The publisher of the book sells the e-book too. It makes you quicker to read this book, since you can read this book in your Mobile phone. So there is no reason for your requirements to past this book from your list.

Deanna Reed:

Typically the book Computers and Computations in the Neurosciences: Computers and Computations in the Neurosciences v. (Methods in Neurosciences) will bring someone to the new experience of reading a book. The author style to elucidate the idea is very unique. If you try to find new book to learn, this book very suitable to you. The book Computers and Computations in the Neurosciences: Computers and Computations in the Neurosciences v. (Methods in Neurosciences) is much recommended to you to see. You can also get the e-book through the official web site, so you can quicker to read the book.

Douglas Elem:

Many people spending their time period by playing outside using friends, fun activity together with family or just watching TV all day every day. You can have new activity to shell out your whole day by examining a book. Ugh, do you think reading a book will surely hard because you have to use the book everywhere? It fine you can have the e-book, taking everywhere you want in your Mobile phone. Like Computers and Computations in the Neurosciences: Computers and Computations in the Neurosciences v. (Methods in Neurosciences) which is obtaining the e-book version. So , try out this book? Let's find.

Cathy Kerby:

In this era which is the greater particular person or who has ability to do something more are more precious than other. Do you want to become certainly one of it? It is just simple approach to have that. What you must do is just spending your time not much but quite enough to get a look at some books. One of many books in the top record in your reading list will be Computers and Computations in the Neurosciences: Computers and Computations in the Neurosciences v. (Methods in Neurosciences). This book that is certainly qualified as The Hungry Inclines can get you closer in becoming precious person. By looking right up and review this reserve you can get many advantages.
