Nowadays, we are dealing more frequently with the entity of large intestine polyps, as endoscopy and bowel cancer screening programmes are rapidly expanding. Often a single polyp is involved, but more complex situations are also encountered, including the well-defined pattern of polyposis. These situations can fall into a gray area, not only for diagnosis, but also for the correct treatment and follow-up. New developments in pathophysiology and treatment options are leading to new questions. This handbook aims to offer an integrated approach for all physicians (doctors) who deal with these issues, by presenting up-to-date discussion from genetics through treatment, to implications of genetic counseling. It will also help specialists to offer more 'evidence-based' treatments, by implementing the best clinical individual judgement informed by the best current scientific evidence.
